DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3 to 9, 11 to 34, 36 to 42, and 44 to 64 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. Applicant disclose a system to decrease the likelihood that an image processing apparatus is used to make unauthorized images by setting information to specify a seller or a buyer of the image processing apparatus inside it. As a result, if the output image were an unlawful image, the seller or the buyer could be specified from the user information multiplexed the output image. Applicant inventive concept is novel and innovative in the sense that it provides an information setting means for setting, in an image processing apparatus, information of a seller or a buyer of the image processing apparatus, the information being obtained through the network; and multiplexing means for multiplexing the information of the seller or buyer of the image processing apparatus set by the information setting means to an output image to be printed by the image processing apparatus so as to facilitate identification of the seller or the buyer of the image processing apparatus from the output image, wherein the set information multiplexed to the output image is not visible in the output image. Benton (US Patent No. 4,962,325) teach an invention that relates generally to electronic funds transfer systems, and more particularly to a unique electronic funds transfer system incorporating facsimile machines both to transfer funds data between buyers and sellers at a common point of sale or at remote locations and to print transaction records including facsimile signatures of the parties. Saito et al (US Patent No. 6182218) teach an invention that relates to a

system for managing digital content, specifically for managing a copyright of digital content claiming the copyright and for securing secrecy of digital content. Benton taken alone or in combination with Saito et al fail to teach or suggest an information setting means for setting, in an image processing apparatus, information of a seller or a buyer of the image processing apparatus, the information being obtained through the network; and multiplexing means for multiplexing the information of the seller or buyer of the image processing apparatus set by the information setting means to an output image to be printed by the image processing apparatus so as to facilitate identification of the seller or the buyer of the image processing apparatus from the output image, wherein the set information multiplexed to the output image is not visible in the output image.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (*see form 892*).
